

Cyclone Yasi

Wayne Kentish – Homeowner Mission Beach QLD

"We've been in the house for almost two years now and I have to say I am absolutely wrapped with Breezway Altair[™] Louvre Windows. I installed Altair[™] Louvres in the Slimline Frame with standard handles and 102mm blades in the Barley colour. I love the style of louvres and really wanted that 'louvre look'. Now after going through Cyclone Yasi, I have to say I am even more impressed with them due to their performance."

"I have never experienced anything like Yasi before. We (my family and builder who is my best mate) stayed in the lounge room for the duration of the cyclone. During the cyclone we could actually hear and feel the sliding windows and doors jumping in their tracks. It was pretty terrifying but the louvres held up well. I would definitely recommend Breezway Altair[™] Louvres to anyone building or renovating a home. My

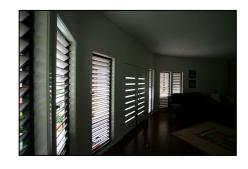

builder, Greg Molkentine came to my house because he felt it was the safest place in the area at the time. We also have sliding doors and sliding windows in the kitchen. No damage from them either - the only damage we received was the water that blew in under the roof cavity."

"We do have air conditioning installed but we only use it at night when there is no breeze outside. I keep the louvres open all day and I didn't install flyscreens on the windows because I didn't want it to take away from the look of the home. But I am that impressed with Breezway Louvres, I'm even considering replacing the sliding door with more louvres – perhaps another four bays. "
